Corner
Cellar Doors

Notes:

Do NOT measure the existing unit

If the foundation layout is switched from the current picture, please make a note

Use the illustration above as a guide to assist you while you take the required measurements below.

Please measure the actual foundation, not the existing unit. In addition, it is important to measure in a variety of places in the event that the foundation has cracked and/or shifted.

These doors can be built either way… “right legged” or “left legged”. The side of the new door that will be metal determines its name. (A “left legged” door is shown in the drawing)
